## **DETAILED ACTION**

## Election/Restriction

- 1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
  - I. Claims 1-28,32-40, 47-50, drawn to a fluorometric sensor, classified in class 422, subclass 50.
  - II. Claims 29-31, drawn to a circuit, classified in class 327.
  - III. Claims 41-45, drawn to a module, classified in class 422, subclass 149.
  - IV. Claims 46, drawn to a detection method, classified in class 436, subclass 546.
- 2. The inventions are distinct, each from the other because of the following reasons:

  Inventions II and III are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, invention II has separate utility such as using it in a large mainframe device without regard to analyte detection while invention III can be used for holding any substance in which a probe having a specific binding partner for an analyte is inside the container.

  See MPEP § 806.05(d).
- 3. Inventions I and II & III are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant

Art Unit: 1641

case, the subcombination has separate utility such as holding any substance in which a probe having a specific binding partner for an analyte is inside the container.

- Inventions IV and I are related as process and apparatus for its practice. The inventions are distinct if it can be shown that either: (1) the process as claimed can be practiced by another materially different apparatus or by hand, or (2) the apparatus as claimed can be used to practice another and materially different process. (MPEP § 806.05(e)). In this case the process can be done by hand up to the illuminating step.
- 5. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.
- 6. Because these inventions are distinct for the reasons given above and the search required for Groups I & III is not required for Groups II or IV, restriction for examination purposes as indicated is proper.
- 7. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.
- 8. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Art Unit: 1641

9. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the

inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently

named inventors is no longer an inventor of at least one claim remaining in the application. Any

amendment of inventorship must be accompanied by a petition under 37 CFR 1.48(b) and by the

fee required under 37 CFR 1.17(I).

10. Any inquiry concerning this communication or earlier communications from the examiner

should be directed to Minh Pham whose telephone number is (703) 305-1444.
